go4hosting
Hosting Simplified

A trusted **technology partner of Fortune 500 companies**, government institutions and small and medium enterprises across industries for close to two decades

Corporate Profile

Go4hosting is a leading provider of enterprise hosting, cloud hosting, website hosting, and application hosting services to global clients across multiple industries. We have an impressive track record of executing and managing large scale IT infrastructure projects for several Fortune 500 firms, government institutions and small & medium enterprises. Our hosting solutions provide our clients the much needed freedom to focus and grow their business while we effectively manage their mission- critical data center infrastructure and maintenance.

Organizational business goals are varied. And, so are our hosting solutions. The only thing constant is our years of expertise and ability to provide customized solutions to each client according to their distinct business needs. Our team of engineers ensure that the data center infrastructure of our clients are up and running with regular system upgrades to ensure maximum security of their data and increased efficiency of their computing systems.

We currently own and operate state-of-the art Tier III data center facilities in Noida and Jaipur (India) which are equipped with cutting-edge hardware and software to deliver best-in-class data center and cloud hosting solutions. Go4Hosting is a brand of Cyfuture India Private Limited.

An increasing number of organizations are moving from an on-premise application hosting set-up to a virtualized environment to meet their varied computing needs. It frees up their in-house IT teams to focus on core business activities, while regular maintenance and service is managed by the application hosting service provider. Go4hosting provides secure, reliable, flexible and scalable application hosting services for clients to host their enterprise wide business applications. Our varied application hosting models -dedicated, cloud and shared-help clients reduce their overall computing costs and drive efficiency in their overall business operations. We have the expertise to manage popular third-party applications from SAP, Oracle and Microsoft.

Case Studies

Hosting and development of an online consumer portal for a Fortune 100 Oil Company

The client was looking for a partner to help build an efficient, transparent and technologically advanced online consumer portal for its more than 2 million consumers and 8000 distributors spread across India. Go4hosting helped the client achieve its objective by developing a user-friendly online platform that eased the interactions between the client and it's large customer base, increased efficiency of client operations and boosted transparency leading to high customer satisfaction. In addition to development and hosting of the portal on its Tier III Data Centers, Go4hosting was also responsible for providing regular maintenance and tele-support to the client's end consumers.
### Data Center for a diversified Indian conglomerate

A leading Indian conglomerate with interests in financial services, manufacturing, healthcare, education and research engaged Go4hosting to build an efficient data center infrastructure for the company. Based on a detailed assessment of client business need, Go4hosting hosted the IT infrastructure of the client in its state-of-the-art Tier III Data center facilities in Noida with dedicated bandwidth and P2P leased lines. The solution helped the client shift from a traditional in-efficient IT environment to an optimal and responsive IT system with faster network speed, rich functionality and reduced total cost of ownership.
